

Leading and Coincident Indexes for the Stone, Clay, Glass, and Concrete Products Industry

February 2001

This report analyzes and explains the USGS's monthly leading and coincident indexes for the stone, clay, glass, and concrete products industry (SIC 32). This manufacturing industry processes industrial minerals, minerals that are neither metals nor fuels, into useful products. More than 50 percent of the total value of these products is shipped to the highly cyclical construction industry. The indexes have been computed for each month back to 1948 and are available on the World Wide Web at: <http://minerals.usgs.gov/minerals/pubs/imii/scghist.txt>

Analysis

The stone, clay, glass, and concrete products leading index jumped 3.5% in January to 174.7 from a revised 168.8 in December, and its 6-month smoothed growth rate rose to 0.8% from a revised -6.4% in December. The 6-month smoothed growth rate is a compound annual rate that measures the near-term trend. A growth rate below -1.0% is usually a signal of a decline in future industry activity and a growth above +1.0 usually signals an increase in activity.¹ Although the current growth rate is close to +1.0%, it has been essentially declining since June of 1999 and has been negative for the past thirteen months. The January increase in the leading index is not enough to indicate that activity in the stone, clay, glass, and concrete products industry could begin a period of sustained growth. Growth will likely decline or remain flat over the next few months.

All four leading index components increased in January, the first time that has happened in 2 years. A rebound in the average workweek in the stone, clay, glass, and concrete products industry contributed 1.2 percentage points to the leading index. New U.S. housing permits issued contributed 1.0 percentage point and the S&P stock price index for building materials companies contributed 0.6 percentage points. The yield spread between the U.S. 10-year Treasury bond rate and the Federal

Reserve's federal funds rate contributed 0.4 percentage points to the leading index (table 2).

Current industry activity, as measured by the coincident index, improved 2.0% in January to 148.4 from 145.5 in December (table 1). The January growth rate increased to -4.8% from a revised -8.8% in December. Although current industry activity increased, its growth rate is still in the range reached during the 1990-91 recession. **Note: Construction activity depicted in Charts 3 and 4 has been revised.**

Explanation

The USGS uses the same methodology for the stone, clay, glass, and concrete products indexes that it uses for the metal manufacturing indexes in the *Metal Industry Indicators*. This methodology consists of constructing and tracking, each month, two composite indexes of diverse economic indicators. The composite leading index for stone, clay, glass, and concrete products signals, several months in advance, major changes in current economic activity as measured by a composite coincident index. The construction of the leading and coincident indexes follows well-established procedures for the analysis of cyclical indicators that were developed at the National Bureau of Economic Research, the U.S. Department of Commerce, and the Center for International Business Cycle Research.

Coincident indicators

The indicators selected to represent current activity in the coincident index for the stone, clay, glass, and concrete products industry are industrial production, the value of shipments in 1982 dollars, and total employee hours worked. The composite index of coincident indicators for SIC 32 is itself a leading indicator of the U.S. economy. It leads the U.S. business cycle an average of 3.6 months at both peaks (end of an economic expansion) and troughs (end of an economic downturn), and it leads at 67% of the turning points from 1948 onward.

Leading indicators

Leading indicators represent various economic activities that can point to near-term changes in industry activity. The following

¹The 6-month smoothed growth rate is a compound annual rate based on the ratio of the current month's index to its average level during the preceding 12 months.

four indicators proved to be reliable at signaling major changes in economic activity in the stone, clay, glass, and concrete products industry: 1) average weekly hours worked in the stone, clay, glass, and concrete products industry; 2) an index of new private housing units authorized by building permits in the United States; 3) the Standard & Poor's stock price index for building materials companies; and 4) the yield spread between the 10-year Treasury bond interest rate and the federal funds interest rate. The composite leading index constructed from these indicators turned before the coincident index at every trough and at 88% of the peaks. Although the leading index did not lead the coincident index at every peak, the average leads at troughs and peaks were 7.3 and 8.4 months respectively, for an overall lead of 7.8 months.

This report was produced at the U.S. Geological Survey by the Minerals Information Team. For more information about these indexes contact, Gail James (703-648-4915), e-mail (gjames@usgs.gov), or Ken Beckman (703-648-4916), e-mail (kbeckman@usgs.gov).

The USGS also produces *Mineral Industry Surveys* (MIS) for virtually all industrial minerals important to the U.S. economy. These include MIS for Cement, Clays, Crushed Stone, Dimension Stone, and Construction Sand and Gravel. Information on how to access these reports is available on the World Wide Web at: <http://minerals.usgs.gov/minerals/pubs>

Tables and charts follow.

Table 1.
The Stone, Clay, Glass, and Concrete Products Industry Indexes and Growth Rates

| | Leading Index | | Coincident Index | |
|-------------|---------------|-------------|------------------|-------------|
| | (1977 = 100) | Growth Rate | (1977 = 100) | Growth Rate |
| 2000 | | | | |
| February | 176.8 | -6.1 | 152.9 | 2.7 |
| March | 176.5 | -6.1 | 153.7 | 3.4 |
| April | 177.8 | -4.5 | 152.8 | 1.8 |
| May | 174.7 | -7.2 | 152.6 | 1.0 |
| June | 172.1 | -9.1 | 152.1 | 0.0 |
| July | 174.4 | -5.8 | 154.8 | 3.0 |
| August | 172.7 | -6.6 | 153.7 | 1.2 |
| September | 171.7 | -6.7 | 153.2 | 0.4 |
| October | 169.6 | -7.8 | 153.7r | 0.8r |
| November | 170.2 | -6.1 | 150.4r | -3.3r |
| December | 168.8r | -6.4r | 145.5r | -8.8r |
| 2001 | | | | |
| January | 174.7 | 0.8 | 148.4 | -4.8 |

r: Revised

Note: Growth rates are expressed as compound annual rates based on the ratio of the current month's index to the average index during the preceding 12 months.

Table 2.
The Contribution of Each Stone, Clay, Glass, and Concrete Products Index Component to the Percent Change in the Index from the Previous Month

| Leading Index | | December | January |
|--|--|----------|---------|
| 1. Average weekly hours, stone, clay, glass, and concrete products (SIC 32) | | -1.8 | 1.2 |
| 2. Index of new private housing units authorized by permits | | -0.5r | 1.0 |
| 3. S&P stock price index, building materials companies | | 1.7 | 0.6 |
| 4. Spread between the U.S. 10-year Treasury Note and the federal funds rate | | -0.4 | 0.4 |
| Trend adjustment | | 0.1 | 0.1 |
| Percent change (except for rounding differences) | | -0.9r | 3.3 |
| Coincident Index | | | |
| 1. Industrial production index, stone, clay, glass, and concrete products (SIC 32) | | -0.9 | 0.1 |
| 2. Total employee hours, stone, clay, glass, and concrete products (SIC32) | | -1.7r | 1.8 |
| 3. Shipments of stone, clay, glass, and concrete products (SIC 32) | | -0.8 | NA |
| Trend adjustment | | 0.1 | 0.1 |
| Percent change (except for rounding differences) | | -3.3r | 2.0 |

LEADING AND COINCIDENT GROWTH RATES, 1977-2001**

Chart 3.
STONE, CLAY, GLASS, AND CONCRETE PRODUCTS LEADING INDEX and
COMPOSITE INDEX OF CONSTRUCTION, 1979-2001

Shaded areas are business cycle recessions. Asterisks (*) signify peaks (the end of an expansion) and troughs (the end of a downturn) in the economic activity reflected by the indexes. More than 50% of the value of shipments of stone, clay, glass, and concrete products is used in new construction. The composite index of construction combines the value of new construction put in place and total employee hours worked in construction.
